I was born in Hungary in 1996. I got involved with programming during my elementary school years which steered me in the direction of becoming a software engineer.

In 2014, during my senior year in high school, I was hired to develop an instant messaging system with P2P video and audio calling for a startup company.

In 2015, I began studying computer engineering at the Budapest University of Technology and Economics. At this point, I was focusing on enterprise application development while I was simultaneously becoming more interested in the contemporary art scene and video game development. It started to seem like my university education had less and less impact on me. I wanted to get some hands-on experience.

In 2017, I left the university and became a full-time employee at Accedo, an OTT company. The job involved smart television application development and the construction of internal tools and processes. In my free time, I started to invest more energy into video game development.

In 2020 I relocated to Guadalajara, Mexico to work at the local Accedo office. The pandemic outbreak had forced all employees of the company to work from home which is where I started coming up with the concept for FreakShow, a point and click adventure game. It was displayed at two contemporary art exhibitions at the end of 2020 in Budapest.

In 2021, I took a creative break from the world of information technology to study philosophy at Babeș-Bolyai University in Cluj-Napoca, Romania.

In 2022, I moved back to Budapest and started working for Nokia, a telecommunication company. The job involves designing, constructing, testing and deploying scalable services for the Nokia Digital Automation Cloud.

I thrive in interdisciplinary environments as my goal is to integrate different fields of art and technology - to make connections, as I believe the way of human development is rather emotional than technological. I wish to believe in a society where people are not just resources, but individuals who trust and respect each other.

References

2022 –

Nokia Solutions and Networks Kft.

Kubernetes based services for the Nokia Digital Automation Cloud.

2018 – 2021

Accedo Broadband HU Kft.

Several projects for American and Middle-Eastern clients. OTT client-side applications for Android, iOS, WebOS, Tizen, and Web. CI/CD toolsets for Tizen and WebOS platforms.

2017 – 2018

OTT-ONE Nyrt.

A recurring payment system and a web based e-learning platform.

2014 – 2015

Youwon Hungary Kft.

A web based second-hand trading platform.

Projects

2020 - 2022

FreakShow

A photo-based video game experiment.

2018 - 2020

RoboLand

A web based 2D video game engine experiment with peer to peer networking.

2013 - 2017

SharpCrop

A cross-platform screen capture utility with cloud integration.
